

Cloud Management Services by ZNetLive

Step by step assistance for your cloud journey – from initiation to deployment to management of ongoing operations to cloud cost optimization, monitoring, and security.

With digitization, cloud computing has become the mainstream. Organizations use cloud to digitize one or the other aspect of their business. But when they move from traditional systems to the cloud, they face hardships in shifting and management constraints thereafter.

ZNetLive cloud management services help manage all aspects of an organization's digital transformation journey from cloud sourcing to implementation, and management. We ensure scalable, agile and secure IT environment for your business.

How ZNetLive cloud management services help?

We provide complete IT assessment to guide which applications and data should be moved to the cloud and which delivery models – public, private or hybrid are best for you.

You get support to identify shadow IT, determine your app groups cloud viability, readiness and migration associated costs and address security and privacy issues as well. You also get infrastructure mapping and real time estimation with fair comparison of TCO of running applications in cloud or on-premises.

Service features

- **Cloud assessment and planning:** Roadmap and guidance to optimize workloads, ready your staff, systems, processes and tools for cloud
- **Infrastructure migration and deployment:** Leverage modern infrastructure as we address your migration challenges like cost and skill shortage
- **Operations management:** We help optimize your existing infrastructure for maximizing your business outcomes
- **Cloud and infrastructure monitoring:** We cover your complete infrastructure stack including applications, and not just cloud
- **Cost optimization:** Resource usage and spend analytics, usage forecasting, tagging and audit trails, custom invoicing, capacity planning and resource optimization.
- **Cloud security:** Ensured peace of mind, while we secure applications and workloads on cloud

Migration and Deployment

- Decide application components you should migrate
- Shut down obsolete and inefficient business applications
- Lift & Shift data and apps from on-premise to cloud.

Rearchitect apps or code changes to enable an application to work on a different platform.

Operations Management

- Infrastructure configuration management
- Backup and disaster recovery
- Identity management
- Automation and DevOps services

Improve IT management capabilities, analytics, reduce TCO, get better asset flexibility

Infrastructure Security

- Security information and event management
- Anti- virus, anti-malware software
- Intrusion detection and remediation

Get web application firewall, encryption and key management services.

ZNetLive cloud management services are a set of capabilities to help you manage all aspects of your cloud journey and your digital transformation related sourcing, implementation, and management needs.
